

Simple. Fast. Revolutionary.

High quality digital finishing is quick and easy with CreaseStream's ground-breaking approach to creasing, cutting and micro-perforating.

Simple. Fast. Revolutionary.
CreaseStream Auto Plus

High quality digital finishing is quick and easy with CreaseStream's ground-breaking approach to creasing, cutting and micro-perforating.

The impressive Auto Plus sits at the top of our lineup and produces high quality creasing/micro-perforating and trimming applications at an average of 10,000 sheets per hour and can apply a combination of up to 5 tools in a single pass.

This version takes a higher stock load of up to 5.9 inches thanks to a specially designed auto fan sheet separator which aids continuous feed consistency. Other than its speed advantage over our other models, the Auto Plus has the facility to cleanly edge-trim the fed sheets with the offcuts deflecting neatly into a waste bin below.

Choose your own combination of 4 Tools from our creasing, micro-perforating & trimming devices.

Here are just a few Features & Benefits

- Eliminates cracking on stocks ranging from 100-400gsm
- Easy to set & operate
- Edge-trimming application included
- Includes special auto-fan feed sheet separator Tooling section can hold a combination of up to 5 creasing/micro-perforating tools
- Choose from a choice of 4 tooling options as your standard tooling kit
- Can be retro-fitted with our FoldStream plough unit to gently fold creased/micro-perforated products

CreaseStream Auto Plus	\$11,600

Prices good thru May 31, 2022. Additional freight charges may apply.

Auto Feed MkII

The **Auto-feed MkII** is the perfect piece of print finishing equipment for businesses that produce both short and high volume production runs

This is the next level of automation – making the CreaseStream Auto-feed MkII one of the easiest creaser to operate. Just set the tools, press the button and you’ll get up to 4,000 sheets of perfectly creased paper per hour. The Auto-feed MkII uses our unique sheet separator, which allows single sheets to be processed with unmatched accuracy and precision. It eliminates any trace of fibre cracking even with sensitively printed digital stocks.

The ultimate desktop digital creasing and micro-perforating machine, the Auto-feed MkII gives you the flexibility to produce a number of applications faster, more efficiently and at a better quality.

- Processes up to 4,000 sheets per hour, keeping up with your press no matter how many creases you need
- Fully automated, making it the easiest creaser to operate
- Exceptional versatility in handling various production volumes and applications
- Comes with two tools as standard – so you can do multiple creases or crease and perforate at the same time
- Single phase electrical plug-in, no vacuum pump and no noise

CreaseStream Auto-feed MKII	\$6,000

Prices good thru May 31, 2022. Additional freight charges may apply.

QUICK-FEED MK II

The Quick-Feed MK II's upgraded feeder system allows you to load and process a higher stack of material than ever before. This machine is the ideal finishing solution for low to medium production businesses looking for fast and high quality creasing.

- Processes up to 4,000 sheets / hour
- 2 tools included, allowing multiple creases or crease & perforate at the same time
- Eliminates cracking on digital and offset stocks up to 400 gsm
- Low environmental impact
- No electrical input, no vacuum pump & no noise
- Perfect crease registration every time

CreaseStream Quick-feed MKII	\$4,200

Prices good thru May 31, 2022. Additional freight charges may apply.

Card Creaser Deluxe

The Card Creaser Deluxe is the simple and affordable solution that will revolutionize your creasing. This machine is easy to set up and simple to adjust, resulting in perfect creases every time.

- Budget desktop creasing solution
- Can produce over 3000 creases / hour on 1,500 sheets per hour
- Hand wind two creases simultaneously
- Suited for stocks between 100 gsm - 400 gsm
- Perfect crease registration every time

CreaseStream Card Creaser Deluxe	\$1,650

Prices good thru May 31, 2022. Additional freight charges may apply.

Pair the CardFolder with your CreaseStream. Pictured above is the CardFolder paired with the AutoPlus MKII with adapter.

The **CreaseStream CardFolder 360 Unit** was designed primarily for folding pre-creased material up to 350gsm. As our automatic Creasing/micro-perforating machines can output up to 10,000 sheets an hour (depending on model) we came up with an idea where the same unit could be used a second time to re-feed them directly into the CardFolder 360. This 2 step operation is still faster than the traditionally slower performing creaser/folders that use a blade and matrix to apply the crease/micro-perforation.

The 2-plate CardFolder 360 enables you to create 5 fold types including the most common half, letter or Z folds. The fold is achieved by the combination of manually adjustable fold plates and large-diameter rubber rollers. This simple but revolutionary solution allows you to create one of the most in demand products in the world of low-production digital presses, i.e. producing professional folds on all kinds of stock up to 350gsm.

5 fold types including 3 most common (half, letter, Z)

Simple alignment with CreaseStream Auto Plus (processing up to 10,000 sheets per hour) or CreaseStream Auto feed Mk II, (processing up to 5,000 sheets per hour)

Robust but simple construction at a great price.
Precise, nicely ironed folds
